

# Logistics Management System

**UNISYS**  
imagine it. done.

## Secure, Flexible, Agile Logistics Management

If air cargo has become a vital part of your business, then you need to manage your logistics operation with maximum visibility, agility and security. Transportation organizations – from regional carriers to global airlines – are looking for tools and systems that provide 24x7 control and synchronization across the enterprises and with alliance partners and suppliers. The Unisys Logistics Management System is designed to provide just that.

Built on decades of industry experience, Logistics Management System gives air carriers and ground handlers the tools to efficiently manage every logistics task, from initial booking to final delivery. That's why this system is used by many of the world's major air carriers.

Logistics Management System goes beyond core logistics capabilities to provide a truly comprehensive and flexible solution that is easily integrated with other applications. It provides automated customer communications and ensures that your customers, partners and employees

have access to the latest information – at all times. And because it's browser-based, it's easy to use, affordable to maintain and can be integrated quickly with other systems.

Logistics Management System links key facets of freight processing, including:

- **Door-to-door Support for Time-Definite Products:** track master air waybills and house air waybills as a whole or split into a single piece, and give ground handlers the information they need to work effectively. Interface with pickup and delivery operators through the Internet, XML, or SMS to communicate pickup and delivery requirements and to record status real-time.
- **Process Control:** drive shipments using advanced bar code/RFID and warehouse systems linked to route plans and work orders.
- **Automated Cargo-IMP Processing:** automatically process incoming Cargo-IMP messages and instantly update system records, with support for Cargo-IMP messages via SITA, email or the Internet.

## Bottom Line Value for You and Your Customers

Our Logistics Management System has provided a wide range of transportation organizations significant and sustainable cost and performance gains, including:

- Savings up to 35% from reduced training and IT costs
- Enhanced customer service, with expedited shipments, timely delivery, accurate tracking data and automated alerts
- Better visibility and process control of the whole shipment process
- More reliable system performance and higher technology ROI
- Seamless integration with partner systems and third-party applications
- Technical flexibility to tailor services
- Operational agility to seize opportunities and stay ahead of market shifts

What's the bottom line? Choose Unisys Logistics Management System and you'll have the tools and technology you need to empower your customers and optimize your logistics operation.

Unisys Logistics Management System is an integral part of the full suite of Unisys Logistics Solutions that help transportation organizations optimize key processes – from booking to delivery to ongoing customer service and support:

- Logistics Management System
- Logistics Hosting and Integration Services
- In-transit Service Manager
- Cargo Portal Services

Unisys Logistics Management System helps transportation organizations run their logistics operations more effectively, flexibly and profitably. Even as the industry changes, you'll gain a distinct competitive advantage by providing the service, control and synchronization your air cargo customers are looking for.

### An Advanced, Flexible Design

Refined and expanded for more than 20 years, Unisys Logistics Management System features modern Web and XML interfaces. For you, that means a lower cost to deploy and upgrade, easier integration with other core systems and external applications, and the ability to tailor applications to your exact needs. And you can leverage the latest technologies, including RFID, to manage, track and measure logistics performance.

Because functions are browser-based and easy-to-use, training costs are lower and employee productivity is higher. Plus, comprehensive security features limit access to authorized users and protect sensitive information. Specific features and modules include:

- Flight schedule and routes
- Booking
- Multi-modal waybill processing
- Tracking/tracing
- Capacity control
- Rating and pricing
- Accounting
- Container control
- Terminal management
- Consolidation
- Customs (U.S., Canada and many other countries through a common design)
- Load planning
- Business intelligence and operational management reporting
- Bar code scanning or RFID-ready operation
- Integrated third-party revenue management

Logistics Management System is available either as a licensed application to be operated and managed by internal IT staff, or as a fully hosted and managed service from Unisys. Hosted solutions give you access to the latest technology and highest levels of system reliability, without the expense of making constant upgrades or maintaining a large IT staff.

And when you invest in Unisys Logistics solutions, you can take advantage of a community- and standards-based approach to enhancements and upgrades. Participants in our AIRCARE community pool resources, coordinate change, share best practices and drive standards across the industry. This approach gives you access to the highest levels of functionality at a lower cost than their competitors.

## Why Unisys?

Why do leading transportation organizations around the world choose Unisys?

**Clarity:** clear understanding of the connections between strategy, process, applications and infrastructure

**Insight:** better, faster decision-making based on integrated data and systems

**Agility:** the ability to move nimbly and take advantage of rapid market shifts

**Security:** risk mitigation, predictability and stability in key operations

**Focus:** solutions that address core operations – passenger processing and facilitation, loyalty programs, cargo management and regulatory compliance

**Experience:** 50+ years experience and consultants from the executive ranks of the industry

**Leadership:** “must read” publications like *Unisys Scorecard*, *FastForward* and *AirCoreNEWS*; regularly quoted experts

**Results:** systems that process 29% of the world’s airline passengers and 35% of the world’s air freight

**Relationships:** 200+ airlines, including 19 of the top 25; 600+ airports; and leading industry groups

**Scope:** solution design and delivery all over the world – the Americas, Europe and Asia/Pacific

Unisys provides solutions for secure business operations. We do it by creating visibility throughout all layers of your enterprise: showing cause-effect relationships between strategy, business processes, applications and infrastructure. This is the 3D Blueprinting™ approach.

Our solutions use market-driven initiatives and technologies in which we have world-renowned credentials.

- Enterprise Security
- Outsourcing
- Real-Time Infrastructure
- Open Source Solutions and Support
- Microsoft Solutions

## Harness the Power of Unisys for Secure Business Operations

Unisys offers you a powerful advantage. Combining Unisys 3D Blueprinting approach and solutions for secure business operations with our trusted core competencies of Consulting, Systems Integration, Outsourcing, Infrastructure and Server Technology. This is the power that Unisys brings to your enterprise.
