

## Stealth(identity) - Biometrics That Make Business Sense

Unisys is recognized as a global leader in People Identity Solutions with a proven track record of successful implementations across the globe. We understand that successful biometric solutions require a solid understanding of the agency objectives, appropriateness of the solution, security of the data, and sensitivity to the willingness of people to provide information so such technologies can be used.

Unisys provides a holistic approach to identity that combines technology, management, business process and operational expertise to deliver higher levels of identity assurance balanced with trust, privacy and convenience. Unisys solutions cover the full life cycle of identity management for state and national-scale identity systems, travel facilitation and border control, employee identification, and access to premises and information systems.

### Stealth(identity)

Our state-of-the-art, service-oriented platform enables comprehensive identity management through biometrics for critical purposes such as microsegmentation, national security, law enforcement and customer verification. Unisys Stealth(identity) solutions provides:

- Our unique library of electronic identity artifacts is an open platform built on industry standards. It is highly scalable, reusable and compatible to a wide range of modalities, technologies and vendors. Stealth(identity) integrates all the modules of identity life cycle, case management, audit and monitoring features, policy-driven controls and compliances.
- Multi-Factor Authentication (MFA) is a unique multi-layer approach customizable to each organization's security requirements. It unifies multi-modal biometric types (e.g. fingerprint, iris, voice, signature and face) with non-biometric credentials for accurate authentication and watch list verification.

## Unisys Biometrics Experience

Unisys has worked with biometric technologies for over 25 years and has enabled successful biometric deployments worldwide.
