

# Unisys Limited

UK Carbon Reduction Plan

Year ended December 31<sup>st</sup>, 2023

# Carbon Reduction Plan

Supplier name: .....Unisys Limited.....

Publication date: ..... 29<sup>th</sup> September 2024.....

## Commitment to achieving Net Zero

Unisys Limited, a subsidiary of Unisys Corporation, is committed to achieving Net Zero emissions by 2030.

## Baseline Emissions Footprint

Baseline emissions are a record of greenhouse gases produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction are measured.

### Baseline Year: Year ending 31<sup>st</sup> December 2020

#### Additional Details relating to the Baseline Emissions Calculations:

**Unisys has no sources of Scope 1 Emissions.** Our UK locations are in leased facilities with multiple tenants. We have no standby electrical generators that consume fuel and no vehicle fleet operations.

**Scope 2 Emissions** are calculated from actual utility meter readings. The applicable emission conversion factor is applied to determine greenhouse gas emissions.

**Scope 3 Emissions** during the baseline reporting year are based on Emissions associated with Business Travel and Employee Commuting. Emissions are calculated using source data in our corporate expense system, Concur. Reports are generated for all mileage claimed for business travel, and all business travel. This includes information provided by the airlines. Greenhouse gas emissions from travel are calculated by converting mileage figures using the applicable conversion factor to determine total fuel used and then applying the applicable emission conversion factor

BASELINE YEAR EMISSIONS	TOTAL (tCO <sub>2</sub> e)
Scope 1	0
Scope 2	1,261
Scope 3: Includes emissions associated with Business Related Travel and with Employee Commuting	276
<b>TOTAL BASELINE YEAR EMISSIONS</b>	<b>1,537</b>

## Current Emissions Reporting: Year Ended December 31<sup>st</sup>, 2023

CURRENT YEAR EMISSIONS (2023)	TOTAL (tCO2e)
<b>Total Scope 1</b>	<b>0</b>
<b>Total Scope 2</b>	<b>670</b>
<b>Total Scope 3:</b> broken down as follows:	<b>1,079</b>
Total Category 4: Upstream Transportation and Distribution	890
Total Category 5: Waste Generated in Operations	1
Total Category 6: Business Related Travel	163
Total Category 7: Employee Commuting	25
Total Category 9: Downstream Transportation and Distribution	negligible
<b>TOTAL CURRENT YEAR EMISSIONS</b>	<b>1,749</b>

Emissions for the baseline year and for the year ended December 31<sup>st</sup> 2021 include Scope 3 emissions for the following Scope 3 Categories:

- Category 6: Emissions associated with Business Travel
- Category 7 Employee Commuting only.

Reports from 2022 onwards include emissions for the following additional categories:

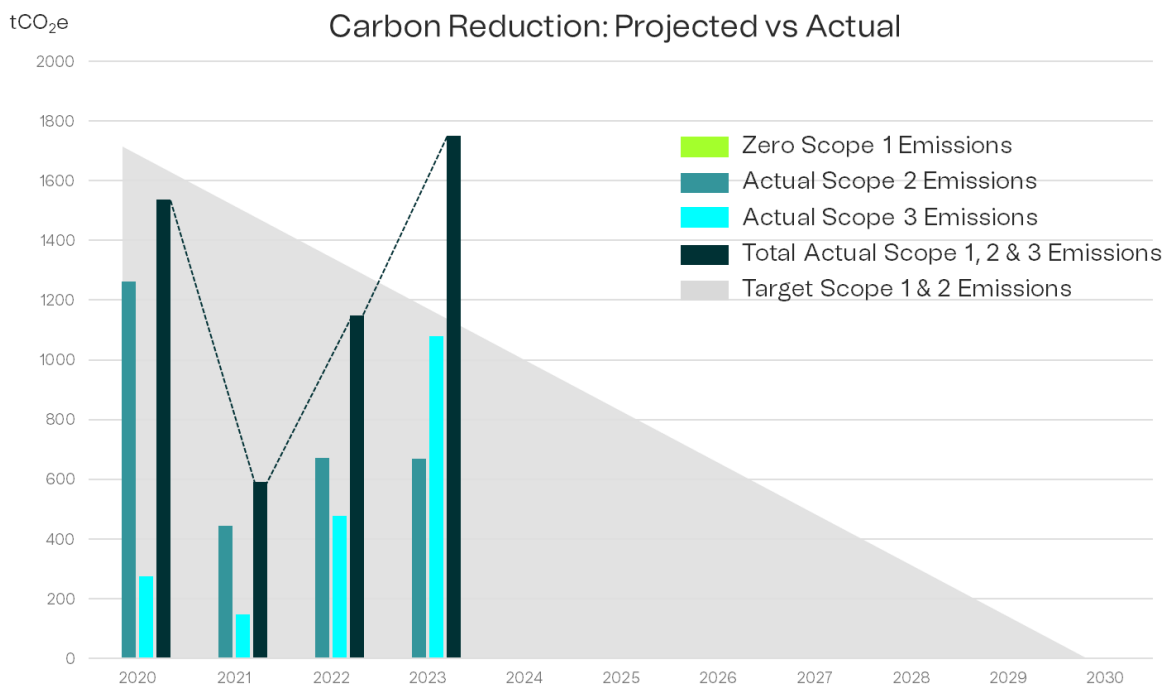

- Category 4: Upstream Transportation and Distribution
- Category 5: Waste Generated in Operations
- Category 9: Downstream Transportation and Distribution

## Emissions reduction targets

Unisys is committed to achieving Net Zero Scope 1 and 2 emissions by 2030. This target is validated by SBTi, which provides independent assurance that this near-term target is credible, anchored in sound science, and aligned with the Paris Climate Agreement’s goal of limiting global temperature increase to 1.5°C

Progress against is shown in the graph below.

- For the fourth consecutive year, we have continued to produce zero Scope 1 emissions.
- Scope 2 emissions reduced year on year by 2 tCO<sub>2</sub>.
- Scope 3 emissions increased because of commuting levels returning to normal levels after lockdown in 2022 and the inclusion of Scope 3 Category 4, 5 and 9 data from 2022 onwards.

## Carbon Reduction Projects

We are committed to preserving the environment and have implemented numerous strategies to do this, both for our own business, our supply chain and our customer base.

We understand the importance of collaboration and follow best practices for our industry. We are a member of the CDP (Carbon Disclosure Project) and the United Nations Global Compact, the world's largest corporate sustainability initiative focusing on advancing human rights, labour, anti-corruption, environment, and other societal goals.

Our 2023 CDP rating for climate related disclosures is B, which surpasses the IT and software industry average rating of C. Our sustainability as a supplier is independently verified by EcoVadis, a leading provider of business sustainability ratings. We maintained our Gold EcoVadis rating for the UK and Europe in 2023.

We adhere to all governmental environmental regulations and strive to go further and conduct business in a manner that respects the environment.

Our Action Plan to reduce our impact on the environment includes:

- 1) Innovating and deploying solutions that reduce our carbon footprint and those of our clients through our products and services
- 2) Collaborating with sustainable partners in the supply chain.
- 3) Increasing energy efficiency. Since 2019, our power consumption has reduced globally by approximately 47%.
- 4) Continual improvement of our environmental performance.
- 5) Fostering environmental responsibility among our employees.
- 6) Reducing or eliminating the use of hazardous substances.
- 7) Sustaining effective product recycling and reclamation programs.

Energy usage across our buildings is the largest contributor to our carbon footprint.

Improvement measures for our UK operations include the following:

- Maintaining a flexible working policy and using collaboration tools including Microsoft Teams for virtual meetings to reduce employee commuting.
- Working with sustainable partners. 2023 Scope 2 emission totals include emissions from our two UK Data Centres, provided by BT Ark. Ark is a member of the CNDCP, (Climate Neutral Data Centre Providers), and committed to the European Green Deal, with the goal of making data centres climate neutral by 2030. They have implemented numerous measures to reduce emissions, including the use of innovative direct air evaporative cooling to lower the energy consumption of hosted infrastructure.

In the future we hope to implement further measures such as:

- Technological developments
- Tools such as renewable energy credits to address Scope 2 emissions
- Carbon credits to support climate mitigation activities

## Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard<sup>1</sup> and uses the appropriate Government emission conversion factors for greenhouse gas company reporting<sup>2</sup>.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard<sup>3</sup>.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

### Signed on behalf of Unisys:
