Precision meets partnership

Manufacturing has always rewarded precision and efficiency. What's changed is the scale of what's possible and the speed at which it's expected. AI, cloud platforms, and connected devices are creating new opportunities to improve IT performance, optimize operations, and keep businesses moving at the speed of demand. Getting there requires more than good technology. It requires a partner who understands what's at stake when IT systems go down and what it takes to keep them running.

What's driving change on the plant floor and beyond

Manufacturing is in the middle of a significant shift. Smart factories, IoT-connected equipment, and AI-driven analytics are giving manufacturers new ways to plan, monitor, and optimize production — and giving IT leaders a direct line to business outcomes.

Today's manufacturing CIOs and IT leaders are tasked with maintaining business continuity and resilience. AI, cloud platforms, security, collaboration tools, and agile workflows are all priorities, alongside a growing expectation that IT leaders understand the business as well as they understand the technology. And they need to deliver all of it on lean budgets. At the same time, complex supply chains, sustainability goals and regulations, and a growing web of connected endpoints across plants and remote sites are creating new challenges and opportunities. Today's IT foundation determines how quickly manufacturers can move tomorrow.

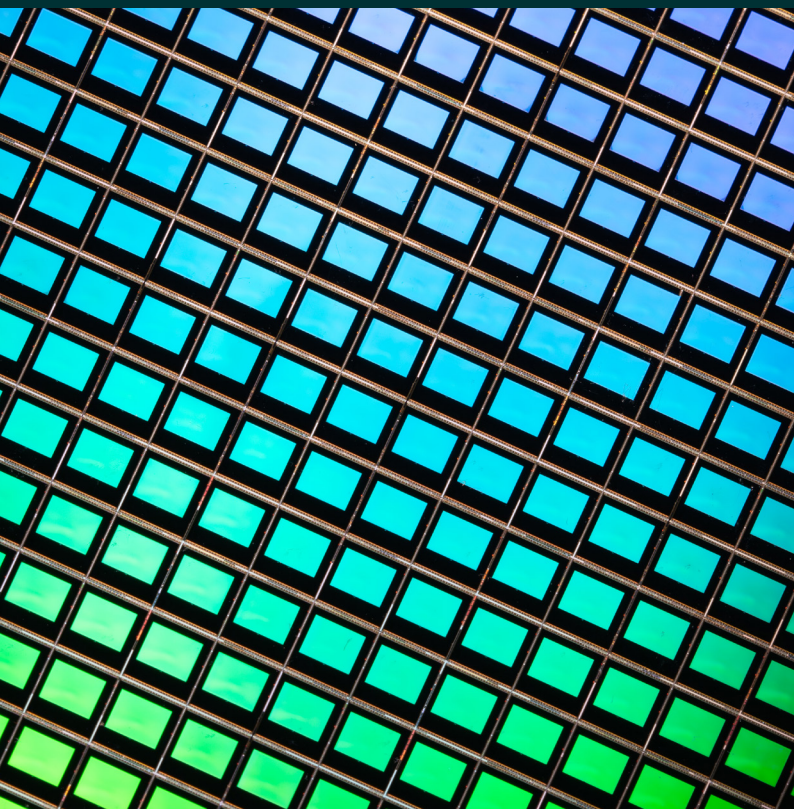

Unisys helps manufacturers seize these opportunities with cloud, digital workplace and cybersecurity capabilities designed to deliver results at scale.

Advance your manufacturing operations through AI-driven insights, secure IT infrastructure and digital workplace solutions that keep your workforce productive and your business moving.

Where manufacturers should focus right now

Manufacturing IT leaders are navigating a set of priorities that are as interconnected as the systems they manage. Addressing them requires focused investment and a clear view of where technology delivers the most value.

01 IT and operational modernization

Your plants and enterprise systems run on infrastructure made for a different era. Modernizing means reducing technical debt, integrating legacy platforms and creating an IT foundation flexible enough to grow with your business without disrupting production.

02 AI and data-driven operations

Your organization generates enormous amounts of data. AI and analytics can surface patterns, enable better decisions and automate routine processes but only when your data infrastructure is ready to support them.

03 Cybersecurity and risk management

A more connected manufacturing environment means a larger attack surface. Protecting endpoints, identities and critical systems across distributed sites requires security that scales with your operations and adapts as threats evolve.

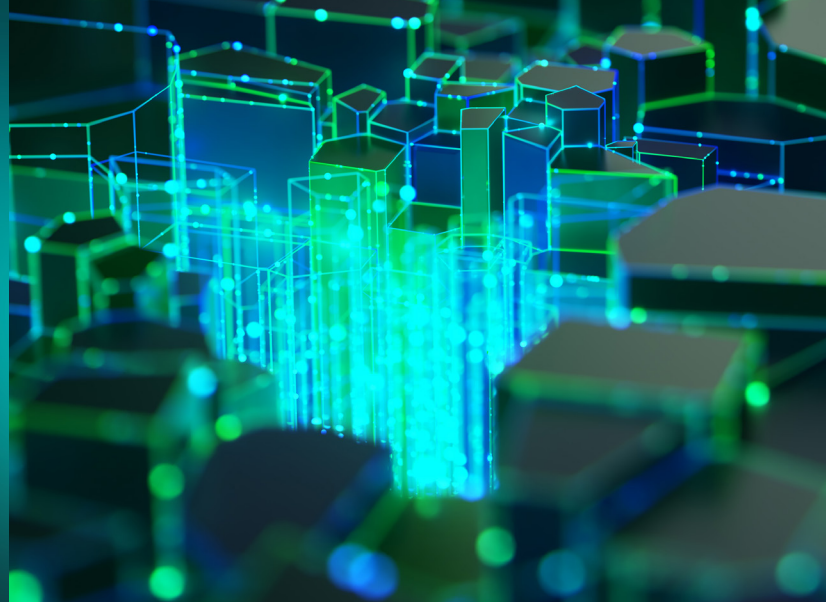

04 Workforce productivity and support

Your teams need reliable technology and responsive support across every shift and every site. That means modern devices, consistent IT support, and digital workplace solutions that reduce friction and keep people focused on the work that matters.

05 Cloud and application agility

Modernizing your application portfolio and finding the right cloud environment, whether public, private, on-premises or hybrid, creates new flexibility and clearer cost control. The best approach depends on your workloads, risk tolerance and business goals.

IT and operational modernization

The opportunity to build a stronger IT foundation has never been greater. Modern platforms, cloud-ready infrastructure, and integrated applications give manufacturers the flexibility to move faster, support new initiatives, and deliver more value to the business.

Unisys helps you get there on your terms. We assess your current environment, prioritize the highest-impact opportunities, and deliver a modernization approach that builds momentum without disrupting the operations your business depends on. We also work closely with partners like [AWS](#), [Dell](#) and [Microsoft](#), so you get best-in-class platforms alongside our enterprise expertise.

The possibilities for your business

- A scalable IT foundation ready to support what comes next
- Reduced technical debt and fewer operational bottlenecks
- Modernization delivered at a pace that works for your business
- Lower operating costs as legacy systems give way to modern, efficient platforms

Unisys solutions and expertise

- **Application development, transformation and integration**
- Infrastructure modernization and optimization
- Process automation and workflow enhancement
- **Cloud migration and modernization**
- Device life cycle management

AI and data-driven operations

Your organization already has what it takes to make smarter decisions: a plethora of data. AI and analytics enable manufacturing IT teams to automate routine processes, surface actionable insights, and resolve issues before they affect productivity.

Unisys connects your data sources, deploys intelligent automation and puts AI-powered service tools to work across manufacturing workflows. We support data and AI enablement with practical analytics that fit your environment so insights quickly become actions. That means improved quality, more predictable IT maintenance, and smarter planning across the enterprise.

The possibilities for your business

- Faster, more confident operational decisions and fewer surprises thanks to predictive maintenance
- Automated processes that free up IT capacity
- AI that delivers real results across your environment
- Greater value from the data your organization is already generating

Unisys solutions and expertise

- **AI-powered service desk and virtual agents**
- Predictive analytics and data-driven insights
- Intelligent process automation and workflow optimization
- AI for operational efficiency and service delivery
- Responsible AI frameworks and governance

Global technology manufacturer

AI-driven IT support across **15** campus sites in **30+** countries delivered a **94%** employee satisfaction score, a **94.06%** first-time fix rate and **35,000** hours saved in IT issue resolution annually. Proactive automation resolved more than **2,000** potential disruptions before employees encountered them.

Cybersecurity and risk management

Manufacturing environments are more connected than ever and so are the risks. Every new plant, partner, endpoint, and cloud workload expands your attack surface. Threats will come. What matters is how quickly you detect, respond, and recover without losing uptime or momentum.

Unisys helps manufacturers build security into the foundation, designing for resilience so you can grow your digital footprint with confidence.

The possibilities for your business

- Consistent protection across distributed sites and endpoints
- Faster threat detection and response
- Security that will scale with your operations
- Confidence to innovate without unnecessary exposure
- Fewer security-related disruptions to operations and productivity

Unisys solutions and expertise

- **Continuous threat exposure management**
- **Cyber recovery**
- **Digital identity and access management**
- **Managed detection and response**
- Data protection and compliance
- Security operations centers
- **Security managed services**

Nutreco

Unisys established a secure data center foundation with two global data centers supporting approximately **2,000** servers and protecting sensitive operational and proprietary data. These services manage Nutreco's infrastructure and platforms, including Windows, Linux, networks, firewalls, backups, SQL databases, Oracle, and Informix, and support capacity management. Unified endpoint management and application services keep operations running reliably across every market.

Workforce productivity and support

When your teams have the right technology and the right support, great things happen. Productivity increases, issues are resolved faster, and people can focus on the work that drives your business forward.

Unisys provides digital workplace solutions tailored for distributed manufacturing environments. Working with partners like [Dell](#), [Nextthink](#) and [ServiceNow](#), we deliver modern device management, multilingual service desk support, and on-site field services that keep your teams equipped and supported across every location and time zone.

The possibilities for your business

- Consistent IT support across every site and shift
- Faster issue resolution and more productive teams
- Device and endpoint management at scale
- Confident adoption of generative AI and other emerging tools across your workforce

Unisys solutions and expertise

- **AI-powered service desk and virtual agents**
- Unified endpoint management
- **Field services and on-site support**
- **Device life cycle management and subscription services**
- Digital collaboration and productivity tools
- Enterprise service management

General Electric Brasil

Unisys delivers intelligent workplace services and desk-side IT support across **828** locations in **328** cities throughout Latin America, serving **17,500+** GE Brasil employees in Portuguese, Spanish and English, improving productivity, enhancing the support experience, and reducing overall IT costs.

Cloud and application agility

Cloud-ready infrastructure and modern applications give manufacturing organizations a real edge: greater flexibility, better performance, and more precise control over costs. A staged approach makes the difference between modernization that sticks and one that stalls.

Unisys designs cloud migration and application modernization approaches that build on your existing investments. Working alongside partners including AWS and Microsoft, we prioritize stability at every step so your operations keep pace with your ambitions.

The possibilities for your business

- Greater flexibility and stronger application performance
- Clear visibility into cloud costs and usage
- A modernization path designed to sustain and scale

Unisys solutions and expertise

- **Cloud migration and modernization**
- **Application development, transformation and integration**
- Cloud cost optimization and management
- Infrastructure modernization and optimization
- **FinOps and financial analysis**

The success of this migration reaffirmed the quality of Unisys' services — it was a true pleasure to work with such talented professionals. With this critical accomplishment, Benjamin Moore is equipped for our next century of growth and industry leadership."

Glenn Pinnel, CIO, Benjamin Moore

Serious about manufacturing. Serious about results.

Manufacturing demands a technology partner with the depth, scale and commitment to deliver consistently across every site, every system and every challenge. Here's what sets us apart.

Global delivery you can count on

With a footprint spanning across the world and experience supporting some of the most complex environments, Unisys brings the scale to match your ambitions wherever your operations take you.

Manufacturing expertise

We understand the realities of manufacturing environments: distributed sites, mixed-device estates, legacy platforms and workforces that depend on consistent, reliable technology. Our solutions are designed around how manufacturing works.

Security built in from the start

Unisys designs security into every solution from day one across every environment we manage. From endpoint protection to identity management and cyber recovery, we help you strengthen your IT resilience.

Outcome-driven managed services

We don't just implement and move on. Our managed services model is designed for continuous improvement, measurable results, and a partnership that gets stronger over time.

A partner ecosystem that extends your possibilities

Unisys works alongside the technology partners you already trust, bringing together best-in-class platforms and our enterprise expertise to deliver integrated solutions that go further.

Champions in collaboration

 Dell Technologies

 ServiceNow

 Microsoft

 AWS

Let's talk about what's next for your operations

Your priorities are unique. Unisys is ready to help you act on them. Let's start a conversation to determine where your greatest opportunities lie and how we can help you move forward.
