

## Cloud Optimization

Continuously Enhance and Govern Your Cloud

### HIGHLIGHTS

#### Solutions:

- **Cloud Optimization Services** – Keep tabs on every aspect of your cloud and decide which optimizations will improve security, governance, business outcomes, and lower costs

#### Platform:

- **CloudForte® Navigator™** – Be sure your cloud is at the top of its game with periodic examinations of your current infrastructure and decide where you can make improvements
- **CloudForte Assure™** – Use on-demand analysis to determine how compliant and regulatory-ready your current systems are and how to remediate any flaws
- **CloudForte Accelerators** – Build security and compliance-ready templates for fast deployment of resources when needed
- **CloudForte AIOPs** – Gain visibility and push time-consuming, manual tasks to automated systems and free up resources

Even within the same organization, nearly every cloud is, by design, different. That makes cloud operations a challenge to contain costs, improve performance, and maintain security and compliance. And incremental changes add up over time, further complicating any effort to keep your cloud environment optimized. Costs can escalate. Performance can degrade. Security vulnerabilities can creep into the environment.

Plus, cloud technology changes rapidly. The cloud you deployed last year may not have the timesaving, performance-enhancing features for your business you could benefit from today, or the new technical designs and configurations that would streamline management.

With Unisys Optimization services, you can slash manual tasks and improve governance through automation and manage and minimize risk. Quickly discover over-provisioned and abandoned resources. Reallocate management dollars to agile development. And most importantly, safely and securely accelerate development and new projects to stay competitive.

### Keep your organization performing at its best.

Continuous cloud check-ups identify opportunities to save money and time while enhancing security and maturing the governance of your environment.

## WHY UNISYS?

Unisys has decades of experience managing and modernizing IT environments just like yours. From a thorough analysis of current systems and dependencies to modernizing and improving business outcomes, Unisys can keep your cloud optimized.

*Adding, upgrading, integrating, and removing applications and components can*

*introduce lag into your cloud environment. Therefore, optimizing cloud investments requires regularly reviewing and fine-tuning your environment to ensure it operates at peak efficiency.*

## How You Benefit

**Stay ahead of the competition – by design.** Keep your cloud options poised for evolutionary change. We can help by optimizing your system performance, lowering costs, governing your security posture, and assessing which options give you the greatest flexibility. With continual improvement and evolution, cost savings, and fully optimized systems, you'll see a quantifiable, competitive advantage. This new agility will allow you to respond to market and business demands while containing costs.

**Optimize your business and IT performance.** Boost worker productivity by regularly assessing network, cloud, and app performance, configuration choice, and service levels and adjust to achieve the best results. You can create cloud accelerators that safely and securely deploy resources while dynamically addressing critical needs. And as you automate more manual management and operational tasks with AIOps, you can redeploy IT personnel for other tasks and to learn new skills.

**Automate security and compliance.** Unisys has a rich history of securing some of the most digitally demanding environments in the world—from government and military agencies to multi-national financial institutions. We can deliver security and compliance services that span your organization, from cloud estates to endpoint devices. Automation of policy enforcement, ID authentication, and vulnerability detection benefit from a centralized, single point of security control. Periodic or on-demand compliance reviews check your environment for system flaws and recommend remediation based on the latest regulatory and security best practices. You are audit-ready and secure.
