UNISYS | Securing Your Tomorrow®

Managed Public and Private Cloud

Operate More Efficiently and Cost-Effectively

HIGHLIGHTS

Solutions:

- **Managed Services for Private and Public Cloud** – Experience complete management of your private and public cloud.

- **Financial Analysis and Optimization** – Assess where your management budget is going and identify ways to improve.

- **Managed Security Services** – Deploy top-down security and compliance services.

Platforms:

- **CloudForte® Cloud Management Platform** – Enhance visibility with an automated central management interface spanning your entire environment.

- **CloudForte AIOPs** – See how operations automation can reduce costs and save time.

Hybrid private/public cloud has many advantages including greater security with on-prem private cloud combined with best-of-breed public cloud innovations and agility, prompting many organizations to adopt a multi-cloud and/or hybrid IT strategy. But legacy apps and on-prem infrastructure coupled with multi-cloud management often result in many organizations spending the majority of their IT budget on management alone.

What's more, the rapid evolution of cloud and IT infrastructures are too complex for most organizations to manage without assistance—especially in public/private hybrid cloud environments where you must deal with multiple vendors and platforms. Security, governance, and regulatory requirements put an additional strain on your IT budget and personnel. To remain competitive, you need to find ways to manage your private and public cloud more efficiently and cost-effectively.

With Unisys managed services for public and private cloud, you gain improved control of your time and money and can better link your IT organization to your lines of business for greater innovation and performance. Enable seamless, secure integration with other systems. Reduce service demands and improve efficiency by bringing all policies and procedures under one fully automated, governed umbrella, cutting costs, and eliminating complexity in the process.

It's time to flip the script with Unisys.
Recoup management costs by automating manual processes and optimizing management with expert guidance and a proven cloud management platform.

WHY UNISYS?

With over 1,300+ cloud-certified personnel in 110 countries, we have the global resources and talent to manage even the most complex on-prem and cloud environments. Each engagement is custom-tailored to our client's needs and goals and is based on deep industry expertise in every sector we support.

Give your organization a competitive advantage by outsourcing the management of your cloud environment. Unisys managed cloud services help you save time and control costs so you realize better business outcomes.

How You Benefit

We deliver expert, vendor-neutral management guidance. Every day, new cloud management products, tools, and strategic options are available. What's right for you and your business? Unisys is 100% cloud vendor-agnostic. Our cloud management experts can assess your business and goals and make management recommendations based solely on your business, using unbiased analysis and criteria. We'll continually improve your management outcomes and keep you abreast of any new opportunities.

No surprises. We provide complete transparency into your cloud management with detailed reports—and recommendations—for continual improvement. We give our clients real-time insights and predictive and proactive analytics on their current and future cloud estate. When coupled with security and compliance services, you have a centralized, continually monitored environment based on up-to-the-minute security and compliance standards.

Take your cloud to the next level. A well-governed and managed cloud is ripe for innovation. Reallocate resources once spent on management alone on new initiatives for business units to boost worker productivity and create superior customer experiences. Our next-generation services include AI-led operations, digital service management, and service intelligence.
