

## Regulatory and Security Compliance

Stay Ahead of Constantly Evolving Policies and Regulations

### HIGHLIGHTS

#### Solutions:

- **Unisys Advisory and Transformation Services** – Get expert advice and consultations on your current environment, recommendations on the best path forward, and a transformation plan to achieve your business objectives
- **Managed Security Services** – Deploy experts to manage 24X7 security and compliance
- **DevSecOps** – Build security and compliance into every stage of the application development lifecycle

#### Platforms:

- **CloudForte® Assure™** – Continually scan your cloud and multi-cloud environment for security and compliance faults based on the latest compliance requirements and best practices
- **CloudForte Navigator™** – Perform periodic top-down analysis of your on-prem and cloud environment for potential threats and non-compliance
- **Unisys Stealth(core)™** – Protect your entire IT estate with one centralized, Zero Trust security solution
- **CloudForte AIOPs** – Automate operations with security and compliance best practices

If your organization is in the public sector, healthcare, finance, and many other heavily regulated industries, you face a growing set of constantly evolving IT compliance and security requirements. Keeping pace with these changes places increasing demands on your staff, who may or may not have the time, tools, or expertise needed for this vital task.

Your existing enterprise governance processes and tools may lack the necessary flexibility and automation to stay current with the more dynamic demands of the cloud. And further complicating your security and compliance management are the differing security, permissions, policies, and authentications among cloud providers and your on-premises solutions. As a result, many organizations “do their best,” knowing that they may have not covered all potential issues and are prepared to pay fines if audits find non-compliance. However, fines and other judgments arising from non-compliance are as much as 2.71 times costlier than the average cost of compliance.<sup>1</sup>

With Unisys, you can keep your systems and environment within compliance including achieving “Authority to Operate” readiness. You can equip your entire enterprise operations with the latest security to identify and eliminate vulnerabilities and protect your data, applications, and network.

### Get ahead of the regulatory curve with Unisys.

Never miss new security or compliance mandates, and be assured you're covered from on-prem to cloud with a fully compliant and continuously secure environment.

## WHY UNISYS?

With over 1,300+ cloud-certified personnel in 110 countries, we have the global resources and talent to manage even the most complex on-prem and cloud environments. Each engagement is custom-tailored to our client's needs and goals and is based on deep industry expertise in every sector we support. In addition, our governance, risk, and compliance framework includes tools, reports, and guidance to tackle the toughest security and regulatory requirements.

*Identify and eliminate vulnerabilities and protect your data, applications, and network. Deploy a*

*governance, risk, and compliance framework that helps keep your systems and environment always in compliance.*

## How You Benefit

**Continuous cloud compliance.** With Unisys, we deliver automated tools to continually scan cloud and multi-vendor environments to detect gaps and remediate faults. Our real-time SaaS application, CloudForte Assure, is updated regularly to perform analysis against more than 16 security and compliance frameworks and 2,100 cloud security policies. So, regardless of changes in your cloud or cloud-based apps, we have you covered.

**On-prem-to-cloud security.** Using one centrally managed solution, Stealth(core), you can set, propagate, and monitor security policies. You get continual monitoring, alerts, and automated remediations. As a result, you can reduce the number of incidents and management headaches from administering multiple security tools and apps.

**Automate app security and operations.** With AIOps and automated, managed hybrid, and single cloud environments, you automate security and compliance operations that reduce costs, manual labor, and potential threats. Make sure every operation, service, or development application follows defined policies and procedures.
