# UNISYS | Securing Your Tomorrow®

## Unisys U-Pass™

### Get Back to the Workplace With Secure Access To COVID-19 Testing Results and Vaccination Cards

## HIGHLIGHTS

- Deploy a proven testing and vaccination reporting solution co-developed by Unisys and healthcare partners

- Test results and vaccination status are easily implemented in one integrated web and mobile application.

- This flexible, competitively priced solution provides a safe pathway to get your employees back to work.

- Access test results, vaccination status, and, with a reliable photo ID such as a passport, validation of any individual/employee identity by matching the ID with irrefutable biometric identification.

- Remove the friction from determining a person's identity and health status for workplace access.

Pandemic-related shutdowns, business disruptions, and fears continue to jeopardize the crucial missions and income of almost every business, government, and non-profit organization. Efforts to sustain ongoing operations can be undermined in an instant by outbreaks of the virus. To adapt, your organization needs a comprehensive, reliable pandemic response plan to minimize coronavirus risk so you can operate safely and remain open.

With U-Pass™, you can easily check incoming workers and customers against a variety of criteria and credentials while tying those results to your physical access systems. Its software-as-a-service (SasS) delivery model provides you with a solution that requires no additional hardware or software to deploy and maintain.

With Unisys U-Pass digital pass, you can validate test results (pass/fail) and keep the appropriate records on returning employees to ensure safer workplaces.

By tying individual test results and vaccination status to access control, U-Pass provides you with the ability to ensure that only individuals authorized by you gain access.

*How do you stay open safely in the new normal?*

*Digital health passes help you protect your workplace environment.*

## Use Cases

- **Back to the Workplace**: Access employee test status and the user's submitted proof of vaccination. Know who is vaccinated and who is not in your workplace.

- **Back to School:** Promote safe and healthy learning environments and determine admittance only when your requirements have been met. Also, keep track of the school population's vaccination status securely.

- **Back to Travel:** Ensure travelers and guests follow required screening protocols by accessing and validating test results along with user vaccine documentation.

- **Back to Tourism:** Enable hotels and entertainment venues to uphold health and safety plans by documenting vaccination and health status of employees and guests from their mobile devices.

- **Back to Peace of Mind at Home:** Simplify the process of ordering test kits from U-Pass healthcare partners, returning samples, and accessing results from an online profile or mobile app.

- **Back to Essential Worker Safety:** Rapidly ascertain the test status and the worker-provided proof of vaccination for essential workers vital to the health and wellbeing of many.

## WHY UNISYS?

Unisys has worked for decades with leading healthcare, life sciences, and pharmaceutical companies worldwide, delivering field-tested and proven identity authentication systems. We have deployed some of the most trusted IT systems for governments, the military, and public agencies, driven by our expertise in complex public sector and large industry installations.

U-Pass delivers security authentication best practices Unisys has derived from industry standards, extensive client experience, and the latest innovations in biometric modeling.

## How You Benefit

- **Near Real-Time Testing:** Many public sector facilities are mandating frequent testing. To fully open your facilities with confidence, testing needs to occur in real time, with results provided within minutes before the employee or individual gains access. U-Pass healthcare partners provide near real-time testing results on the spot—not days or weeks later.

- **Within-The-Workplace Safeguards:** You can integrate thermal camera readings into U-Pass to instantly detect atypical temperatures and deny access to workers above a specified threshold. In addition, all workers and others who enter the facility can be provided an always-in-place wearable monitor for the same purpose.

- **Access Control:** No matter how many tests are performed, your workplace is at risk unless each positive-testing individual is automatically denied access to facilities. U-Pass allows you to integrate testing with modern building management, badge scanning, and lock systems. A positive test can result in automatic denial of access and a medical referral and quarantine advisory.

- **Privacy Protection:** Matters of health raise privacy issues and call for the highest levels of security. The U-Pass solution was designed with security and privacy in mind, particularly HIPAA and GDPR compliance.

- **Rapid Time to Value:** U-Pass features a highly scalable SaaS backend and a web and mobile user app front end. With no additional hardware or software needed, it can be in use at your organization in as quickly as two weeks.

- **Full Integration With Existing Systems:** U-Pass integrates smoothly with your corporate systems to ensure that you gain situational awareness of virus-related matters, full visibility into trends, and the ability to adapt your approach to comply with applicable government regulations.
