

Turning AI and cloud capability into business value

The Unisys AI & Cloud Insights Report 2026 surveyed 1,000 senior IT and business decision-makers across eight global markets to find out what's separating the organizations pulling ahead.

Here's a glimpse of the findings:

75%

say agentic AI is essential
only 23% have scaled it

Only

7%

report AI job displacement fears
down from 32% a year ago

90%

have the architecture for
data-driven decisions
65% are meeting efficiency
goals, down from 80%

49%

suffered a breach in the past year
nearly 3x the year before

Four strategies. Real results.

- 1 Prepare agentic AI for real work.**
Leaders build five foundations that take agentic AI from pilots to production, starting with use cases tied to operational impact.
- 2 Close the gap between capability and value.**
Leaders do more with what's already built, converting existing foundations into results before adding more.
- 3 Start with outcomes, then align technology.**
Leaders work backward from the business result, so every modernization decision earns its place.
- 4 Align AI and cybersecurity strategies.**
Leaders build security in from the start, making it the control layer that lets agentic AI scale safely and innovation moves faster.

Ready to get more from your AI and cloud investments?

See how leaders put all four strategies to work, with benchmarks for your industry and market in the Unisys AI & Cloud Insights Report 2026.
