

Enable a New Level of Resilience in Your ServiceNow® Security Operations Center

Unisys Stealth® on ServiceNow®

The prevalence of IoT devices along with a huge increase in home offices is increasing the available attack surface and driving up the frequency of cyberattacks. Many organizations are struggling to identify these new security threats and vulnerabilities, prioritize them and coordinate with IT to remediate them.

What Stealth™ Does on ServiceNow

Seamlessly Integrates

On the ServiceNow platform, Unisys Stealth® seamlessly integrates into your ServiceNow® Security Operations environment.

Detects Threats and Generates Alerts

Stealth detects threats and then generates alerts in ServiceNow, allowing all security incidents to be tracked and monitored from a single location.

Rapidly Isolates Threats

When a threat is detected, Unisys Dynamic Isolation™ rapidly isolates all anomalous or potentially compromised endpoints within seconds—before they have a chance to spread.

Keeps Critical Services Running

With the threat isolated, other network services can remain fully functional as security analysts investigate and mitigate the incident.

Stealth enables fast isolation and fast deisolation so an enterprise can instantly remove a single device (or thousands of devices) from the network at malware speed and bring them back just as quickly—with one click, or in a completely automatic way.

Most Solutions Are Too Slow to Address Catastrophic Cybersecurity Events

The Ponemon Institute says the mean time to detect a breach is 197 days. Responding to a breach typically takes another 69 days.

Unisys Stealth enables endpoints—and, thus, people and systems—to continue working even when they're in safe mode.

Unisys Stealth is different. It acts at malware speed.

Respond to Threats Faster and Stay Productive

Protection

Dynamic Isolation improves resilience to threats inside the enterprise, with fast detection and automated incident triage and response.

Management

Stealth deployment is centrally managed. As your security policies evolve, changes can be made once and instantly propagate across the enterprise.

Automation

Using Security Operations, security analysts and vulnerability managers can seamlessly automate their security tools and communicate with IT by working in a unified platform.

Prioritization

ServiceNow and Stealth can align related threats, prioritize them and provide IT professionals with a quick and easy way to respond to them.

Productivity

While other cybersecurity solutions focus on detection and prevention and inundate the IT team with alerts, ServiceNow and Stealth can align related threats, prioritize them and provide IT.

Unisys Stealth Extends Security, Resilience and Trust

- Stealth provides a proven Zero Trust and micro-segmentation model of threat management and operational resilience that fits perfectly within the Now Platform®.
- Stealth enables your security team to quickly isolate compromised endpoints with surgical control and remediate incidents without widespread disruption.
- Stealth's increased security brings accelerated innovation, service delivery and lower costs as the focus shifts from crisis to confidence.
