Collaboration Security and Governance

IT's Risk Exposure Blind Spot

Unisys provides, through its wholly owned subsidiary Unify Square, Collaboration Security and Governance (CSG). Collaboration. Security and Governance (CSG) is not one size fits all. Most enterprises have more nuanced requirements when it comes to balancing the needs of their users and locking down security. While many InfoSec teams would prefer to place strict limits, real-world scenarios require more flexibility. Native Microsoft 365 admin tools place rigid restrictions and divide collaboration security and governance functionality among multiple complex consoles. Many policies require varying levels of enforcement, and few large enterprises want to apply blanket policies across their entire environment. Overloaded IT teams must juggle all these competing priorities or face collaboration catastrophe.

Collaboration Management and Security Suite

Meet PowerSuite: Your One Tool to Monitor, Analyze, and Secure Collaboration and Communications Environments

PowerSuite is the first cross-platform software suite to empower IT teams to manage and secure collaboration and communications platforms. With actionable insights to ensure operational excellence and productive end users, PowerSuite delivers a single pane-of-glass view for enterprise meetings, chats, and calls.

Discover: Security Analytics

The first step to securing your collaboration environment is to understand existing issues. Security Analytics surface blind spots across your entire environment, as well as common usage patterns.

Manage: Advanced Governance

Most organizations require nuanced security policies to cover different use cases. Advanced Governance gives IT and InfoSec teams the flexibility to define right-fit policies and create exceptions as needed.

Secure: Flexible Enforcement

The key to security that fits an enterprise's needs is having multiple options for addressing potential violations. Flexible Enforcement allows IT teams to select the best option for the policy, whether it's high-priority automatic enforcement or lower-priority end-user notifications.

Governance and Compliance Software

PowerSuite's single pane of glass approach to governance combines the functionality of multiple admin consoles into one intuitive security experience. There's no need to over-permission IT personnel with a slew of admin roles and licenses. PowerSuite's role-based access control gets a further enterprise-grade boost with our unique **Data Access Control**, which empowers IT to define access to user data by geography, organization, and more.

Discover: Security Analytics

When it comes to Collaboration Security and Governance, many IT teams don't know where to start. Security Analytics provides the information you need before you start creating policies.

PowerSuite includes insights into:

- Guest Access

- Team Analytics

- User Reporting

- Risk Assessment

- Anonymized Risk Score Benchmarking

Secure: Flexible Enforcement

Picking the right enforcement model is key to a successful policy. High-priority policies require immediate action, while others just require tracking over time. PowerSuite offers flexible enforcement, including:

- Compliance monitoring

- Forward issues to service desk

- Bot/Email end-user notifications

- Automatic enforcement with admin approval

- Set and forget enforcement

Manage: Advanced Governance

Go beyond out-of-the-box with AI-powered policy management. Define customized enterprise-grade policies that adapt to your Microsoft Teams environment. Some key PowerSuite features include:

- Guest Policies

- Team Policies

- Lifecycle Management

- Adaptive Scopes: Dynamically apply policies to the right group of teams every time.

- Smart Policy Management: Intelligent AI-powered policy recommendations

- Impact Analysis: "What-if" scenarios show the effects of a new policy before implementation

- Compliance: Key metrics to measure collaboration security and governance success

Monitor, Measure, and Manage Collaboration Security

PowerSuite Cloud Managed Services for Governance

PowerSuite Cloud Managed Services provides 24x7x365 administration, maintenance, and security of your collaboration implementations. This service covers chat, channels, and files to ensure secure and productive collaboration. The Collaboration Security focus of our managed services is made up of **3 core focus areas**:

- Operations: Active policy creation, assignment, reporting/insights and enforcement.

- Policy Review and Change Management: Tracking current policies vs changes in business and/or Microsoft Teams updates.

- White Glove Team Lifecycle Management: Hands-on security and sprawl protection and oversight.

Teams Security and Governance Design Service

Creating, approving, and maintaining a comprehensive Microsoft 365 and Teams-specific governance model is a complex process. This design workshop is a collaborative engagement where we will help you create and architect your governance and security policies for Teams.

The plan is a technical guide to integrate Teams into your existing security model while providing a framework for all stakeholders to review, approve, and integrate new collaboration features and integrations as they are released to the product.

Collaboration Security and Governance RightTrack™

With the introduction of collaboration to your communications stack, there are many new considerations for IT and InfoSec teams. The Collaboration Security RightTrack™ focuses on managing the balance between collaboration and security
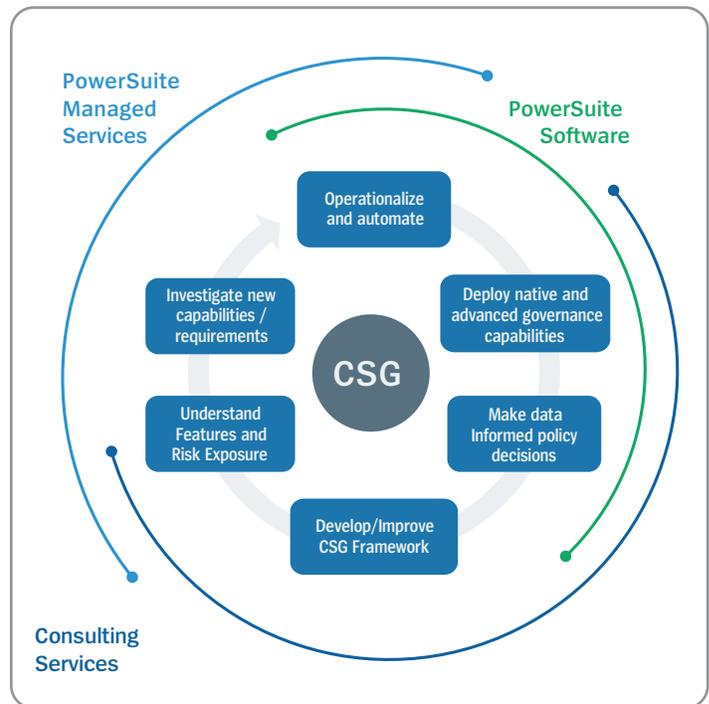

for organizations using Microsoft Teams, Microsoft 365, and Zoom. Our consultants will provide you with a topline model and audit of your current collaboration governance structure, policies, and group lifecycle settings (including Azure Directory and Microsoft 365 settings). Then, we will work with you to set up a basic collaboration security model, built for your organization.

About Unisys

Unisys is a global IT services company that delivers successful outcomes for the most demanding businesses and governments. Unisys offerings include digital workplace services, cloud and infrastructure services and software operating environments for high-intensity enterprise computing. Unisys integrates security into all of its solutions. For more information on how Unisys delivers for its clients across the government, financial services and commercial markets, visit www.unisys.com.
