Collaboration Security and Governance

IT's Risk Exposure Blind Spot

Collaboration security and governance is not one size fits all. Most enterprises have more nuanced requirements when it comes to balancing the needs of their users with ensuring a secure environment. Native Microsoft 365 admin tools require rigid restrictions and divide collaboration security and governance functionality across multiple consoles, limiting governance to blanket policies. However, real-world scenarios require flexibility and varying levels of enforcement, leaving IT teams responsible for carrying out custom monitoring and enforcement policies. Overloaded IT teams must juggle all these competing priorities or face collaboration catastrophe.

Unisys provides Collaboration Security and Governance through PowerSuite™, a product of its subsidiary Unify Square. Read on to learn more.

Collaboration Management and Security Suite

Meet PowerSuite™: Your One Tool to Discover, Manage and Optimize Collaboration Governance

PowerSuite is the first cross-platform software suite that empowers IT teams to create strong yet flexible security policies to support their collaboration platforms without impeding employee productivity. With actionable insights to ensure operational excellence and increased productivity, PowerSuite delivers a single-pane-of-glass view for enterprise meetings, calls, documents, and more.

Discover: Security Analytics

The first step to securing your collaboration environment is to understand existing issues. Pinpoint blind spots and identify common usage patterns across your environment using Security Analytics.

Manage: Advanced Governance

Large organizations require nuanced security policies to manage different use cases. Define flexible right-fit policies and create exceptions as needed using Advanced Governance.

Optimize: Flexible Enforcement

The key to optimal collaboration governance is actionable workflows, customized to an organization's needs. Set up automatic workflows for custom policy execution using Flexible Enforcement. Options range from high-priority automatic enforcement to lower-priority end-user notifications.

Governance and Compliance Software

PowerSuite's single-pane-of-glass approach to governance combines the functionality of multiple admin consoles into one intuitive security experience. Instead of over-permissioning IT personnel with a slew of admin roles and licenses, PowerSuite's Data Access Control allows admins to define access to user data by geography, organization, role, and more.

Discover: Security Analytics

When it comes to Collaboration Security and Governance, many IT teams don't know where to start. Security Analytics provides the information you need in order to start creating policies.

PowerSuite includes insights into:

- Guest Access

- Team Analytics

- User Reporting

- Risk Assessment

- Anonymized Risk Score Benchmarking

Optimize: Flexible Enforcement

Picking the right enforcement model is critical for successful collaboration governance. High-priority policies require immediate action, while others just require tracking over time. PowerSuite's flexible enforcement options include:

- Automatic email notifications to end users

- Automatic admin approval

- Forwarding issues to the service desk

- "Set-and-forget" enforcement

Manage: Advanced Governance

Go beyond out-of-the-box with AI-powered policy management. Define customized enterprise-grade policies that adapt to your environment. Key PowerSuite features include:

- Adaptive Scopes: Dynamically apply policies to the right group of teams every time

- Compliance: Evaluate collaboration security and governance success using key metrics

- Guest Policies: Ensure guests are limited in their access

- Impact Analysis: See the effects of a new policy before implementing it

- Smart Policy Management: Leverage AI-powered policy recommendations

- Team Policies: Tailor sensitive data access to the appropriate teams

Discover, Manage, and Optimize Collaboration Security

Managed Services for Governance

Rest easy with 24x7x365 security oversight and administration for your collaboration implementations. Unisys Managed Services cover chat, channels, and file-sharing to ensure secure and productive collaboration. Our Collaboration Security focus encompasses three core areas:

- Operations: Active policy creation, assignment, reporting/insights and enforcement.

- Policy Review and Change Management: Monitoring of current policies, as well as business changes and Microsoft Teams updates.

- White Glove Team Lifecycle Management: Hands-on security, sprawl protection, and oversight.

Teams Security and Governance Design Workshop

Creating and launching a comprehensive Microsoft 365 and Teams governance model is a complex process. Our Teams Security and Governance design workshop will help you create and architect your governance and security policies for Teams.

The result is a technical guide for integrating Teams into your existing security model, while providing a framework for all stakeholders to review, approve, and integrate new collaboration features as they are released.

Collaboration Security and Governance RightTrack™

The introduction of collaboration to your communications stack brings many new considerations for IT and InfoSec teams. Collaboration Security RightTrack™ focuses on balancing collaboration and security for organizations using
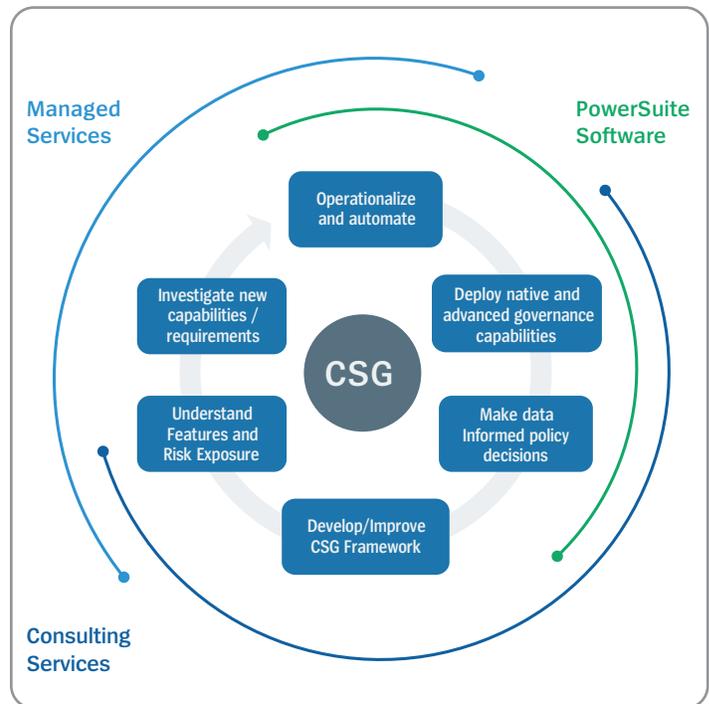

Microsoft Teams, Microsoft 365, and Zoom. Our consultants will provide you with a topline model and audit of your current collaboration governance structure, policies, and group lifecycle settings (including Azure Directory and Microsoft 365 settings). We will then work with you to set up a basic collaboration security model, specifically built and customized to your organization.

About Unisys

Unisys offerings include digital workplace solutions, cloud and infrastructure solutions, enterprise computing solutions, business process solutions and cybersecurity solutions.
