Ensuring Experience Parity for a Competitive Advantage

Achieving the highest levels of productivity and collaboration today entails creating a digital workplace powered by the right mix of personalized tools and capabilities. Your digital workers expect to be able to take full advantage of social, mobile, analytics, and cloud technologies to get their jobs done. In the modern work environment, they demand real-time access to work, anywhere, anytime and expect experience parity in the workplace.

Unisys Seamless Collaboration Services bring you a comprehensive suite of products, services, personas, tools, and components to equip your workforce. Aimed to deliver an outstanding End-User Experience (EUX), our products and services enable your employees to quickly switch between communication modes and devices without interruption. Your digital workers will always have the right tools for the job at their fingertips, allowing them to operate at optimum levels of productivity to increase your profitability.

Plus, with our strong emphasis on ensuring a streamlined and effortless experience, employee satisfaction is enhanced across your enterprise. Your customized digital workspace will attract and retain the skilled talent you need to drive your business forward.

Empowering the Digital Worker

At Unisys, we begin with a deep understanding of your Enterprise Collaboration Maturity level, including the devices and applications that are used to get the job done.
Through Unisys Seamless Collaboration Services, your employees are empowered to:

- Seamlessly collaborate and communicate anywhere, any time, on any device
- Unlock their creativity and easily find data, documents, people, and resources within your enterprise
- Implement online co-authoring across applications, saving time and money
- Readily create and share content, intellectual property, and institutional knowledge across remote, global, and distributed teams
- Automate routine tasks such as scheduling, surveying, and sending notifications

Our simplified yet robust management capabilities enable you to implement distinct user journeys based on personas. Personas can be created through a combination of artificial intelligence and machine learning “behavior-focused” design. You can also take advantage of many time-saving features, such as automated provisioning and de-provisioning, streamlined workflow tools, and user-friendly monitor and reporting capabilities, through a single dashboard that empowers you to monitor all your collaboration tools.

**Securing a Dispersed Workforce**

Security is foundational at Unisys. Within our productivity and collaboration suite, we bring you a seamless and secure end-user experience that meets your business need to support a dispersed workforce. We address content holistically — regardless of how the content is accessed — to enhance end-to-end security through appropriate policies and governance. With Unisys, you can fully protect the growing volumes of data, users, and devices in your environment while reducing complexity, alleviating demands on your resources, and complying with regulations such as HIPPA and GDPR.

**Achieving Digital Transformation**

At Unisys, we have a proven track record of leading global organizations in digital workplace transformation. We are a Gold Managed Services Provider Partner with Microsoft, collaborating to seamlessly implement technologies that will enable you to achieve the highest levels of workforce productivity, employee performance, and end-user satisfaction.

Unisys’ productivity reporting and analytics, including end-user sentiment analysis, will provide you insights to continue improving and exceeding user expectations while avoiding downtime.

**Seamless Collaboration in the Office-Less Office**

A team is organizing a workshop with multiple topics across specific breakout rooms. Employees are participating from around the world on different devices (laptops, desktops, tablets, and phones). Through Unisys Seamless Collaboration Services, everyone collaborates live on the same content, and key insights and takeaways are automatically documented keeping all historical changes. Seamless Collaboration enables team members to switch from one device to another during the sessions without losing context.

While the workshop is in progress, the Unisys support team prevents any failure through a set of proactive monitoring tools, to help ensure enhanced productivity, employee experience, and user satisfaction.

**Right-Size Compliance, Security, and Governance for Microsoft 365**

Effective yet effortless security governance is critical for productivity and collaboration success within the M365 ecosystem. However, finding a governance solution that ensures a positive employee experience, all while complying with enterprise security guidelines, is not easy. Unisys provides, through its wholly owned subsidiary Unify Square, a Collaboration Security Governance solution that gives your team the right-size, flexible governance frameworks they need. By working hand-in-hand with your business leaders, end users, and IT teams, we can help you balance your collaboration security needs with your productivity goals.
