

Drive growth with AI-powered applications

Unisys Application Development and Transformation

Highlights

Governed agentic AI and Unisys Intelligence Accelerator-enabled delivery and accelerators

Automated intelligent application discovery, assessment, and rationalization

Modern software architectures and AI-assisted development across the development life cycle

Agentic and generative AI integrated into your application ecosystem with human oversight and observability

Client-paced modernization for mission-critical applications

Security, governance, and compliance integrated across application development, transformation, and delivery

Organizations require high-performing, scalable, and secure applications to align technology with business objectives. Yet legacy applications and fragmented development can slow innovation, increase technical debt, and make it harder to adopt AI safely across the software development life cycle.

Modern applications simplify upgrades, support, and maintenance, making it easier to embrace innovation, align with evolving business needs, and adopt AI with the governance, observability, and human oversight needed for enterprise-scale delivery.

Application Development and Transformation helps organizations design, build, modernize, and transform business applications using cloud-ready architectures, governed agentic AI, and application accelerators. Powered by the Unisys Intelligence Accelerator platform, it helps accelerate requirements generation, code development, testing, remediation, and deployment while maintaining security, quality, and operational control.

Enhance user experiences

Deliver contextual, engaging application experiences that increase customer satisfaction while maintaining governance and human oversight.

Achieve digital agility and improve operational efficiency

Legacy applications may need to move to the cloud, evolve into composable architectures, or gain new AI-enabled capabilities. Unisys offers governed AI-powered development and transformation solutions that are secure, cost-conscious, and minimally disruptive. Application portfolio assessment and automated analysis help identify the optimal path, such as refactoring, rewriting, replatforming, or rearchitecting.

How you benefit

- **Increased business value:** Drive innovation by expediting release cycles and continuously introducing new features and updates. By aligning modernization and business outcomes, your application investments can support growth and agility.
- **Decrease technical debt while gaining operational efficiency:** Automate processes with governed agentic AI, optimize resource efficiency, and reduce manual effort. Modern applications help you save on infrastructure, maintenance, and licensing costs while improving delivery consistency.
- **Advanced functionality and performance:** Gain intelligent automation, scalable architectures, and optimized resource utilization. Improve application speed, reliability, and responsiveness while maintaining security, governance, and control.
- **More-engaged:** Increase user engagement and satisfaction with intelligent, contextual, and modern AI-assisted features, contributing to higher retention and customer loyalty.
- **Increased market competitiveness:** Modernize processes, culture, and customer experiences using the latest digital technologies. Governed AI-enabled development, testing, and deployment help you innovate faster while reducing modernization risk to compete more effectively.

Why Unisys?

Unisys partners with you to guide technology adoption and innovation strategies. We govern end-to-end agentic delivery, bringing mission-critical delivery experience, human oversight, and cross-domain accountability across applications, cloud, infrastructure, and security.

We deliver flexible engagement models, working directly with organizations or alongside strategic partners and startups. Unisys draws on application accelerators, industry-specific intellectual property, and specialized domain knowledge to help deliver scalable, secure, and outcome-driven solutions across the public sector, financial services, retail, and other regulated industries.

Governed, secure modernization

Modernize applications with security, compliance, observability, and governance embedded from design through delivery.
