

Solution brief

Govern and manage security continuously

Security Governance and Management

Highlights

Dedicated Client Security Officer for strategic oversight and executive engagement

Security life cycle change management as environments, threats, and regulations evolve

Centralized governance, risk, and compliance as a single source of truth

Leadership and orchestration of Unisys MDR, CTEM, and IAM solutions

Security integrated across cloud, workplace, applications, data, and AI

Data-driven holistic security leadership and continuous innovation

Cyber threats, complex regulations, and talent shortages leave many organizations reacting to security gaps project by project instead of governing them continuously. Fragmented tools and siloed oversight create duplicate risk registers, misaligned investments, and slow decisions.

The Unisys Security Governance and Management solution is a continuous embedded governance capability that extends your chief information security officer's (CISO's) team. It provides standing security leadership and life cycle oversight, aligning security with business objectives and regulatory obligations through centralized governance, risk, and compliance while adapting to AI and emerging threats.

As threats and regulations evolve, our solution scales as a standing relationship rather than a series of projects. A named, accountable client security officer closes the gap between strategy and execution, reducing governance fragmentation, protecting compliance posture, and safeguarding operational resilience.

Continuous governance

Replace reactive, project-based security transformation with a standing, accountable governance capability embedded as an extension of your organization.

The Security Governance and Management solution unifies governance, risk, and compliance under one accountable relationship spanning cloud, workplace, applications, data, and AI. Your client security officer drives continuous evolution of every managed security service via a Continuous Service Improvement Plan, strengthening compliance, operational efficiency, and resilience.

The Unisys Intelligence Accelerator, Unisys' governed AI platform, powers this human-led governance solution. It provides AI-driven intelligence, continuous control monitoring, and compliance evidence while its guardrails layer keeps every AI agent used in delivery secure, identity-aware, and audit-ready.

How you benefit

- **Continuity of accountability:** Replace transactional, project-by-project engagement with a dedicated client security officer, giving you a consistent strategic partner who carries institutional knowledge of your environment over time.
- **Reduced governance fragmentation:** Centralized governance, risk, and compliance decreases duplicate or conflicting risk registers, control frameworks, and compliance tracking that accumulate when governance is handled per domain or per project.
- **Faster, better-informed decisions:** Benefit from current-state visibility instead of a snapshot that is stale by the time it is acted on. Your leadership will be grounded in live operational data from MDR, CTEM, and IAM.
- **Regulatory readiness by design:** Keep your compliance posture current with ongoing life cycle management mapped to EU AI Act, DORA, NIS2, and sector frameworks rather than remediated reactively ahead of audits.
- **Operational leverage from existing investments:** Gain a governance layer that makes MDR, CTEM, or IAM more strategically coherent without procuring a separate, disconnected governance, risk, and compliance capability.

- **Scope elasticity without re-engagement:** Expand coverage to a new domain, regulation, or business unit as a simple scope adjustment within the standing relationship rather than as part of a new procurement cycle.
- **Outcome-driven and measurable:** Bolster your posture with metrics and reporting that demonstrate progress. The solution targets measurable improvement in the first 90 to 100 days and continuous risk reduction afterward.

Why Unisys?

As a recognized cybersecurity leader, Unisys positions security governance and management as your CISO's trusted advisor, delivered by a cross-functional team led by a senior client security officer. Our experts average more than 10 years across all cybersecurity domains, providing the depth and continuity that organizations facing talent shortages struggle to maintain. With flexible engagement, whether outsourced, co-sourced, or advisory, and an outcome-driven focus that targets measurable progress in the first 90 to 100 days, Unisys makes security a business enabler rather than an obstacle.

Proactive security leadership

Trade a reactive, siloed approach to security for a strategic, continuously governed program emphasizing accountability, risk reduction, compliance, and resilience.
