

Create a Safer Workplace at Your Public Sector Agency

No Matter What Course COVID-19 Takes, U-Pass™, the Fully Integrated, Secure Digital Pass, Helps Make Your Workplace Safer

As you settle on the right safety measures for your public sector agency's in-person workplace, you are confronted by uncertainty. Vaccinations may or may not be required for employees and citizens who enter the agency workplace. COVID-19 cases are declining. Variants are emerging. Boosters may or may not be required. Even when the endemic replaces the pandemic, concerns may linger on all sides – management, employees, and the citizens they serve.

You can't predict the course that COVID-19 will take, but you know you must try to provide services as safely as possible. Why?

- Many citizens need to access your agency's services in person
- **Millions of jobs** cannot be performed from home
- Even employees who work remotely can have difficulty collaborating
- Tacit knowledge – the kind that comes from imitation, emulation, and apprenticeship – is jeopardized by virtual work

- Some employees find remote work to be isolating, to the detriment of morale
- Leaders are **challenged to cultivate a unifying culture** among remote employees
- Many worry that problems – e.g., employee dissatisfaction – are hard to detect in time to remedy – especially worrisome today when employee retention is a significant challenge for many agencies

You need your employees – some, many, or all – in the workplace to fulfill your mission and serve citizens. To do so safely, you need to have proper controls in place. Unisys U-Pass™ Digital Pass helps make that control possible.

Your work is essential. To serve citizens, people in your agency need to work together in person. U-Pass Digital Pass helps you do so safely.

How U-Pass Works - The Basics

With U-Pass, you can easily verify incoming employees against a variety of criteria and credentials while tying those results to your physical access systems. Its Software-as-a-Service (SaaS) delivery model requires no additional hardware or software for you to deploy and maintain. You can validate test results (pass/fail) on the spot and keep the appropriate records on returning individuals to ensure a safer environment.

By tying individual test results and vaccination status to access control, U-Pass lets you ensure that only individuals authorized by you gain access to your workplace. You gain peace of mind about the health and safety of individuals while employing a process that removes friction for the individuals involved.

We're living in a world of COVID-19 uncertainty, pressure for in-person services, and concerns about retaining talented resources. U-Pass helps your agency offer your employees and the citizens they serve a safer environment.

How Your Agency Will Benefit

Near Real-Time Testing: When/if frequent testing mandates are in effect, testing needs to be rapid with results in minutes *before* employees or citizens gain access. U-Pass healthcare partners provide near real-time testing results on the spot—not days or weeks later.

Inside the Workplace Safeguards: You can integrate thermal camera readings into U-Pass to instantly detect atypical temperatures and deny access to individuals above a specified threshold. In addition, all who enter your facility can be provided with an always-in-place wearable monitor for the same purpose.

Access Control: No matter how many tests are performed, your facilities are at risk unless each positive-testing individual is automatically denied access to facilities. U-Pass allows you to integrate testing with modern building management, badge scanning, and lock systems. A positive test can result in automatic denial of access and a medical referral and quarantine advisory.

Privacy Protection: Matters of health raise privacy issues and call for the highest levels of security. The U-Pass solution was designed with security and privacy in mind, particularly HIPAA and GDPR compliance.

Rapid Time to Value: U-Pass features a highly scalable SaaS back end and a web and mobile user app front-end. With no additional hardware or software needed, it can be in use at your organization in as quickly as two weeks.

Full Integration with Existing Systems: U-Pass integrates smoothly with your current systems to ensure that you gain situational awareness of COVID-19-related matters, full visibility into trends, and the ability to adapt your approach to comply with applicable government regulations.
