

Keep Them On Campus – Your Students, Instructors, and Staff

No Matter What Course COVID-19 Takes, U-Pass™, the Fully Integrated, Secure Digital Pass, Helps Make In-Person Learning Safer

School is open. School is closed. Dorms are full. Dorms are empty. Vaccinations are required. Or maybe not. COVID-19 cases are declining. Variants are emerging. Boosters may or may not be required.

In today's swirl of COVID-19-related uncertainty and chaos, university and K-12 administrators can be certain of three things: First, COVID-19 remains a threat requiring vigilance and safeguards. Second, you can't predict mandates or variants while the pandemic continues. Third, the mission of education is vital to everyone – too critical to remain diminished.

The High Cost of Education's Closures

COVID-19's forced shift to virtual learning was better than no learning, but it came at a high cost. Universities lost millions in tuition revenue even while they were forced to spend millions to accommodate virtual classes and create safer facilities for in-person students. Community colleges suffered as many of their trade courses transfer poorly to

online learning because they require students to learn how to use tools and handle equipment. Tuition payments plummeted as students dropped out.

Students were shortchanged. According to the [National Bureau of Economic Research](#), there were large reductions in passing rates between 2020-2021.... *The decline was significantly larger in districts that offered less access to in-person schooling.* A [Rand report](#) found that the pandemic "lowered teacher morale and contributed to increased burnout." Parents' employment suffered as they stayed home to teach and care for children.

School and university boards are under tremendous pressure to keep their facilities open and restore extracurricular activities and events. It's essential, it's possible, and it's *safe with Unisys U-Pass™*.

In-person learning is essential, possible, and *safer* with Unisys U-Pass.

How U-Pass Works - The Basics

With U-Pass, you can easily check incoming students and staff against a variety of criteria and credentials while tying those results to your physical access systems. Its Software-as-a-Service (SaaS) delivery model requires no additional hardware or software for you to deploy and maintain. You can validate test results (pass/fail) on the spot and keep the appropriate records on returning individuals to ensure a safer environment.

By tying individual test results and vaccination status to access control, U-Pass lets you ensure that only individuals authorized by you gain access to your educational facilities. You gain peace of mind about the health and safety of individuals while employing a process that removes friction for the individuals involved.

Education is vital. Fulfill your mission by helping make in-person learning a reality at your school or university.

How Your School/University Will Benefit

Near Real-Time Testing: When/if frequent testing mandates are in effect, to fully open your facilities with confidence, testing needs to occur in real time, with results provided in minutes *before* people gain access. U-Pass healthcare partners provide near real-time testing results on the spot—not days or weeks later.

Inside School Safeguards: You can integrate thermal camera readings into U-Pass to instantly detect atypical temperatures and deny access to individuals above a specified threshold. In addition, all who enter your facility can be provided with an always-in-place wearable monitor for the same purpose.

Access Control: No matter how many tests are performed, your facilities are at risk unless each positive-testing individual is automatically denied access to facilities. U-Pass allows you to integrate testing with modern building management, badge scanning, and lock systems. A positive test can result in automatic denial of access and a medical referral and quarantine advisory.

Privacy Protection: Matters of health raise privacy issues and call for the highest levels of security. The U-Pass solution was designed with security and privacy in mind, particularly HIPAA and GDPR compliance.

Rapid Time to Value: U-Pass features a highly scalable SaaS back end and a web and mobile user app front end. With no additional hardware or software needed, it can be in use at your organization in as quickly as two weeks.

Full Integration with Existing Systems: U-Pass integrates smoothly with your current systems to ensure that you gain situational awareness of virus-related matters, full visibility into trends, and the ability to adapt your approach to comply with applicable government regulations.
