Compete Better and Retain Talent With a Safer, Healthier Workplace

No Matter What Course COVID-19 Takes, U-Pass™, the Fully Integrated, Secure Digital Pass, Helps Make Your Workplace Safer Again

Uncertainty confronts you at every turn as you settle on the right safety measures for your in-person workplace. Vaccinations may or may not be required. COVID-19 cases are declining. Variants are emerging. Boosters might or might not be required. Even when the endemic replaces the pandemic, concerns may linger on both sides – management and employees.

You can't predict the course that COVID-19 will take, but you know that an empty workplace is probably not sustainable.

- Millions of jobs cannot be performed from home

- Even those employees who work remotely can suffer from difficulty in collaborating

- Tacit knowledge – the kind that comes only from imitation, emulation, and apprenticeship – is jeopardized by virtual work

- Some employees find remote work to be isolating, to the detriment of morale

- Leaders are challenged to cultivate a unifying corporate culture among remote employees

- Many worry that problems – e.g., employee dissatisfaction – are hard to detect in time to remedy – especially worrisome today when employee retention is a significant challenge for many organizations

If you need your employees – some, many, or all – in the workplace to perform with excellence and compete successfully in today's demanding environment, Unisys has the answer. U-Pass™ Digital Pass can help mitigate the risk of COVID-19 by putting proper safety controls in place.

> Gain peace of mind about worker health and safety while employing a process that removes friction for the individuals involved.

How U-Pass Works - The Basics

With U-Pass, you can easily check incoming employees against a variety of criteria and credentials while tying those results to your physical access systems. Its Software-as-a-Service (SasS) delivery model requires no additional hardware or software for you to deploy and maintain. You can validate test results (pass/fail) on the spot and keep the appropriate records on returning individuals to ensure a safer environment.

By tying individual test results and vaccination status to access control, U-Pass lets you ensure that only individuals authorized by you gain access to your workplace. You gain peace of mind about the health and safety of individuals while employing a process that removes friction for the individuals involved.

How Your Organization Will Benefit

Near Real-Time Testing: When and/if frequent testing mandates are in effect, testing needs to be rapid, with results in minutes *before* employees gain access. U-Pass healthcare partners provide near real-time testing results on the spot—not days or weeks later.

Inside the Workplace Safeguards: You can integrate thermal camera readings into U-Pass to instantly detect atypical temperatures and deny access to individuals above a specified threshold. In addition, all who enter your facility can be provided an always-in-place wearable monitor for the same purpose.

Access Control: No matter how many tests are performed, your facilities are at risk unless each positive-testing individual is automatically denied access to facilities. U-Pass allows you to integrate testing with modern building management, badge scanning, and lock systems. A positive test can result in automatic denial of access and a medical referral and quarantine advisory.

Privacy Protection: Matters of health raise privacy issues and call for the highest levels of security. The U-Pass solution was designed with security and privacy in mind, particularly HIPAA and GDPR compliance.

Rapid Time to Value: U-Pass features a highly scalable SaaS back end and a web and mobile user app front end. With no additional hardware or software needed, it can be in use at your organization in as quickly as two weeks.

Full Integration with Existing Systems: U-Pass integrates smoothly with your current systems to ensure that you gain situational awareness of COVID-19-related matters, full visibility into trends, and the ability to adapt your approach to comply with applicable government regulations.

In a world of uncertainty about COVID-19 and concerns about retaining talented resources, U-Pass helps your organization offer your employees a safer, healthier workplace.
