

Solution brief

Turn your hybrid cloud plans into reality

Unisys Hybrid Cloud
Transformation Services

Highlights

System assessment using advanced tooling and discovery

AI-enabled insights and automation powered by Unisys Intelligence Accelerator

Customized transformation that covers legacy modernization, migration, rehosting, refactoring, testing, and management

Architecture, blueprints, automation, and design of target environments by certified architects

Repeatable “migration factory” approach

Agile, iterative, and destination-agnostic methodology

Teams certified in Amazon Web Services, Microsoft Azure, and Google Cloud Platform and industry-leading content and managed services

Demand is rising for cloud migration services with continuous stakeholder engagement, feedback, and issue resolution. You need a smooth, low-disruption transition across hybrid cloud environments.

Unisys Hybrid Cloud Transformation Services offers a comprehensive, secure, and phased approach to transforming and modernizing IT environments across public, private, neo-cloud, colocation, and data center environments. It helps organizations migrate, modernize, optimize, and govern workloads based on business needs while helping maintain operational continuity and control.

Unisys begins with workshops to gather your business case and technical requirements. After assessing migration readiness and priorities for rehosting versus refactoring, Unisys experts design target environments and align the roadmap with your priorities and risk tolerance.

Migrating is only the first step. Unisys subsequently helps modernize applications to meet your evolving needs.

Right destination for every workload

Assess, migrate, modernize, and optimize servers, virtual machines, application data, databases, and web applications with Unisys.

Streamline hybrid cloud migration and modernization

Speed up transformation with Unisys' "migration factory" approach, featuring established reference architectures and secure landing zones that help organizations migrate, modernize, and optimize workloads across cloud and data center environments. Unisys excels in adapting applications for the cloud, offering comprehensive services to repackage them (refactor) or to overhaul them for cloud-native capabilities (rearchitect).

Unisys Intelligence Accelerator, an AI-enabled platform, embeds capabilities to identify modernization opportunities, automate key activities, and provide greater visibility throughout the transformation journey. This governed, client-paced approach aligns transformation with operational risk tolerance while helping maintain visibility and control throughout delivery.

Automated, repeatable processes and agile methodologies, including waves, squads, and sprints, contribute to a consistent and well-organized transition. With this approach, Unisys provides customized services through vendor-neutral migration blueprints tailored to your unique requirements.

How you benefit

- **Increased value:** Reduce infrastructure and related IT staff costs while keeping your data secure and compliant with industry regulations. Maximize your return on investment while optimizing security, reliability, and operations.
- **Improved performance:** Optimize workload placement, application performance, and infrastructure efficiency across cloud and data center environments.
- **Smoother migration:** Benefit from phased migration and modernization across hybrid environments that help reduce risk, complexity, and business disruption while maintaining continuity.
- **Streamlined process:** Experience an efficient, reliable, and scalable hybrid cloud transformation with the migration factory approach, reducing risks and increasing alignment with business goals. You benefit from workstreams that prepare your organization for the migration as well as standard operating procedures and automation to simplify the process.

Why Unisys?

When you work with Unisys, you'll tap into knowledge and expertise gained from thousands of hybrid cloud migrations and real-world experience delivering solutions and services for highly regulated industries. Benefit from Unisys' skilled professionals, proven blueprints, and established methodologies for application life cycles, migration, and DevSecOps.

Unisys applies a client-paced approach that aligns modernization with operational priorities and risk tolerance, helping organizations reduce disruption and maintain business continuity. Proprietary tools like Unisys Intelligence Accelerator embed AI-driven insights, automation, and governance into every engagement.

And because transformation doesn't have to end at migration, Unisys extends accountability into ongoing operations, optimization, and resilience through Hybrid Cloud Managed Services.

Get your applications
hybrid cloud-ready

Refactor, replatform, or rearchitect applications to boost portability, performance, and efficiency across cloud and data center environments.
